# PROBLEM STATEMENT

Need for a **single, unified platform** in the healthcare landscape to alleviate inefficiencies and complexity.

Users encounter difficulties in managing healthcare tasks, such as **remembering medication timings** or adhering to **specific prerequisites**

Users face challenges in accessing real-time information about **medicine availability at different medical stores**, leading to inconvenience and uncertainty when trying to obtain essential medications.

Users encounter challenges in organizing and accessing **medical documents**, managing personal profiles, and **tracking health progress efficiently**.

# SOLUTION STATEMENT

Our web application serves as comprehensive suite of healthcare services accessible via the internet. Moreover, it embodies the essence of a super app, consolidating diverse medical functionalities into one unified platform for seamless and personalized user experiences.

## FEATURES

- **Appointment Booking**
- **HealthFile Upload**
- **Personalized Health Plans**
- **Health Tracker**
- **Medication Timing Management**
- **Medicine Availability Checker**
- **Chatbot Interface**(for completeing all above manual tasks)

# BUSINESS MODEL

- **Tiered Subscription Plans:** Offer different subscription tiers with varying levels of access and features, such as basic, standard, and premium plans.
- **Monthly or Annual Billing:** Provide users with the flexibility to choose between monthly or annual subscription billing cycles, with discounts offered for annual commitments.
- **Online Web Consultancy:** Offer online consultations with healthcare professionals as an additional subscription-based service, with fees charged per consultation session or through bundled packages based on the frequency of consultations required by subscribers.
